

# DUAL-DETECTION OUTDOOR SENSOR

## GENERAL INFORMATION:

The **Dual-Detection Outdoor Motion Sensor** can be placed up to 2000ft from the **tattletale™** base unit. It is sensitive to moving heat and has an adjustable coverage area. The maximum coverage area is 40ft x 90°. It can operate normally between -4° and +122° F, is weather resistant, and IP54 rated. The 3V CR123A Lithium Battery provided will typically last for 2-3 years.

## Mounting Instructions:

For best detection mount the sensor so that intruders move across the field of view rather than directly towards it. Mount the detector 31" to 48" high; ideally 48". Use the enclosed brackets for pole mounting. Use the designated holes in the back cover for screw mounting or the optional magnets.

## General Troubleshooting

If there is a rapidly flashing zone light on the **tattletale™** base unit that corresponds to the zone of your Dual-Detection Outdoor Motion Sensor you will need to check 4 areas:

1. Check that the sensor's battery is above 2.9 volts, if not replace.
2. Check that the sensor's battery hasn't been dislodged.
3. Verify that the sensor is within range of the **tattletale** base unit.
4. There may be damage to the sensor that would require repair or replacement.

## Adjusting the distance of detection

- Loosen the lock screw on the bottom of the front cover.
- Press and slide the detection length switch to the desired position (**Fig. 2**).
- **Position A** = detection up to 40ft.
- **Position B** = detection up to 25ft.
- **Position C** = detection up to 16ft.
- **Position D** = detection up to 7ft.

### Follow these steps to change the batteries:

- Loosen the lock screw on the bottom of the front cover
- Remove the back cover of the sensor by loosening the screws caddy corner on the top and bottom.
- Locate and replace the CR123A battery
- Depress the blue RESET button on the transmitter opposite of the battery and reassemble (**Fig. 1**).
