

Signal Booster

Optional accessory

General information

The Booster can double the range of the **tattletale™** wireless accessories depending upon structures in-between the **tattletale™**, the Booster, and other wireless accessories. The Booster is intended for quick and easy "plug and play" indoor or outdoor installation.

Protect Anything.
Anytime.
Anywhere.

Use as many optional accessories as you need for each **tattletale™** alarm unit.

Installation instructions

The Booster must be placed within 2000 feet of the accessories that are being monitored.

Mounting Instructions

The Booster does not have to be mounted to anything, but if it is more convenient, you can mount it to any fixture with the provided screws.

DO NOT mount the Booster on a metal surface, inside metal enclosures or near sheet metal ductwork.

To do this, remove the top cover and use the four corner holes to mount the Booster.

Testing the booster

The best way to test the Booster is to use an accessory within the extended range of the Booster to verify that the Booster is transmitting signals back to the **tattletale™**.

Troubleshooting

If the Booster does not appear to be working properly: Make sure that the Booster is placed properly so that there aren't any structures, buildings, dirt mounds, etc. that could be blocking the signal.

In some cases, raising the Booster up 10 or 12 feet off of the ground is a good way to deal with large structures that may be blocking the signal.
